Canine Senior Wellness Program

The following guidelines are our general recommendations for preventative health for your dog. Because each animal is unique, we will tailor your pet's health program as needed for optimal care.

Annual Care:	Biochemistry/Complete Blood Count/Urinalysis every 1-2 years beginning at 6-8 years of age depending on the breed
	Tonopen evaluation for glaucoma (increased eye pressures)
	ECG evaluation for heart arrhythmias (abnormal heartbeats)
	Thoracic (chest) radiographs to evaluate the heart and to check for the presence of lung tumors

Crater Animal Clinic strives to help keep our patients happy and healthy throughout their lives. Annual wellness examinations and preventative care are the best methods for helping us keep your pets healthy and to identify any potential illness or condition early before your pet begins to show symptoms. When caught early, many of these conditions can be effectively managed by medication, dietary management or supplementation. By taking a preventative approach, you provide your pet with the best chance of a long, happy, healthy life! Call us to schedule a wellness exam today.
